

Learn the Earth, Find the future. Study in diversity, on the job, from the world.

We live on a dynamic Earth, which is filled with risks – such as natural disasters, environmental and energy problems, outbreaks of disease, nuclear safety, steady supply of resources.

We should make compromises with such environmental and social risks, often linked to each other, as we seek to live sustainably.

The WISE Program for Sustainability in the Dynamic Earth is a new graduate program launched in Tohoku University.

The program will embrace passionate students who wish to tackle the problems related to risks and sustainability, and

help them attain their goals. With our world-class inter- and trans-disciplinary education program, you will study in diversity, on the job, from the world.

Tohoku University WISE Program for Sustainability in the Dynamic Earth

- ✧ 5-year graduate program
- ✧ Integrated curriculum cooperated with industry and international organizations
